Field Trips #11-12

Time Travel: An all-important point for locating harvestable stands of herbs. We traveled from early summer up to middle spring's second wave of blooms. Use this technique for finding the right time and proper elevation.

Wildcrafting Principle: Timing is important for determining the size of the stand. This trip we saw an example with *Valeriana sitchensis* in full bloom and easily visible amidst the other plants.

Botany

Keyed out: *Dichelostemma congestum*, *Cephalanthera austinae*, and *Rhododendron macrophyllum* from the beginning of the book.

Botanical words for dry fruits

Boraginaceae: Alternate leaves, four rough nutlets, scorpioid inflorescence

Lamiaceae: Opposite leaves, square stems, bilabiate flowers, 4 smooth nutlets

Fabaceae (Leguminosae): Uniquely bilaterally symmetric (banner, wings, keel), fruit a legume, one simple pistil

Apiaceae (Umbelliferae): Flowers in umbels, fruit a schizocarp, sheathing petioles

Ericaceae capsules

Low Elevation Coniferous Woods

Changes: Plants of early summer

Old Growth: Trees as big as small redwoods

Low Elevation Riparian Zone

Many new plants

Low Elevation Disturbed Areas

Fake Dandelion, *Hypochaeris radicata*, after True Dandelion, *Taraxacum officinale* in the same year.

Leucanthemum vulgare and *Hypochaeris radicata* association

Middle Elevation Meadows

Locating *Valeriana sitchensis*

Middle Elevation Coniferous Woods

Second wave of flowers in full bloom finishing up at 4,500'
